

### R E M A R K S

Careful review and examination of the subject application are noted and appreciated.

### SUPPORT FOR THE CLAIM AMENDMENTS

Support for the amendments to the claims can found in the specification as originally filed, for example on page 8, lines 15-17, on page 10, lines 6-11 and page 13, lines 1-4.

### CLAIM OBJECTIONS

The objection to claim 41 has been obviated by amendment and should be withdrawn.

### CLAIM REJECTIONS UNDER 35 U.S.C. §112

The rejection of claims 37-38 under 35 U.S.C. §112, second paragraph, has been obviated by amendment and should be withdrawn.

### CLAIM REJECTIONS UNDER 35 U.S.C. §102

The rejection of claims 32-34, 36-40, and 49-53 under 35 U.S.C. §102(e) as being anticipated by Tacklind et al. (U.S. Pat. No. 5,704,366) has been obviated by amendment and should be withdrawn.

Tacklind discloses a system for monitoring and reporting medical measurements (Title).

In contrast, claim 1 of the present invention provides a system for displaying personal health information comprising a server, a software program, and a display. The server may be coupled to one or more databases containing (i) health information, (ii) other information from a health provider and (iii) other inputs relevant to an individual. The software program may be configured to process data from the databases to generate a personalized health model by combining personalized data from the databases with a generalized model. The display may be coupled (i) to a multimedia processor and (ii) to the server over a network. The display also (i) presents personalized health information in the form of a body image corresponding to a plurality of body parts of a person and (ii) highlights one of the body parts in response to the personalized health model. Claim 53 provides similar limitations. Claim 56 provides similar limitations.

Tacklind does not disclose or suggest a display that presents personalized health information in the form of a body image corresponding to a plurality of body parts of a person, as presently claimed. At best, Tacklind discloses an animated character with arms that move. Tacklind fails to disclose or suggest a body image corresponding to a plurality of body parts of a person, as presently claimed. Furthermore, Tacklind does not

disclose or suggest highlighting one of the body parts in response to the personalized health model, as presently claimed. At best, Tacklind discloses an animated character with arms that move when the present measured value switches zones (see Col. 8, lines 19-21 of Tacklind). In any event, Tacklind does not disclose or suggest highlighting one of the body parts in response to the personalized health model, as presently claimed. Therefore, the claims are fully patentable over Tacklind and the rejection should be withdrawn.

As such, the presently claimed invention is fully patentable over the cited references and the rejection should be withdrawn.

**CLAIM REJECTIONS UNDER 35 U.S.C. §103**

The rejection of claims 35 and 41-48 under 35 U.S.C. §103(a) as being unpatentable over Tacklind (U.S. Pat. No. 5,704,366) has been obviated by amendment and should be withdrawn.

Claims 35 and 41-48 depend, either directly or indirectly, from claim 1 which is now believed to be allowable.

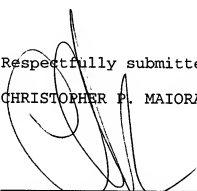

As such, the presently claimed invention is fully patentable over the cited references and the rejection should be withdrawn.

Accordingly, the present application is in condition for allowance. Early and favorable action by the Examiner is respectfully solicited.

The Examiner is respectfully invited to call the Applicant's representative at 586-498-0670 should it be deemed beneficial to further advance prosecution of the application.

If any additional fees are due, please charge Deposit Account No. 50-0541.

Respectfully submitted,  
CHRISTOPHER P. MAIORANA, P.C.
